

# Task 1

In the images below I simply duplicated the code and created a new javascript file. I also changed the attributes of the input, for instance “email” and “password”.

## Task 2

In the following images, I have created three checkboxes named [box1, box2, box3]. I have assigned a value and input type for each, as well as referenced the vue application in the “v-model”. Finally i used a span tag to display the array of which boxes have been selected.

# Task 3

In the following task I have created an application that returns a selected sport using v-model and v-for elements as illustrated below.
